

The Universe is Expanding?

Famous Scientist and their **Mistaken Discovery** - **Now it's lawfully- 100% Purified**

Shahidur Rahman Sikder: Just by the more faculty research, see the following information is unraveling of a mystery, about **Completed New Discovery of the Universe**.

Edwin P. Hubble said- universe is expanding. I am saying expended velocity of the universe is going forward towards the critical radius.

Consequently lawfully, Famous Scientist has made **Mistaken Discovery**, **now it's 100% Purified**. From long time- People & Students have been receiving education- **The Blunder discovery** and in my research- results- **it's now 100% completed**.

Edwin Hubble between Me - Completed New Discovery of the Universe

The above the image or picture is of **Astronomer Edwin P. Hubble**- using the telescope, Astronomer Edwin P. Hubble first observed the distribution of galaxies in space. Scientists discovered that the universe is expanding and lawfully, Nobel foundation gave Nobel Prize to the scientist in 1929.

Edwin Hubble looked by the telescope- He said- The Universe is expanding yet- from my theoretical research result, People can find that- **The Universe is not expanding; expended velocity of the universe is going forward towards the critical radius.**

Who is right about the expanding Universe! People found out from the following gravitation theory- "Gravitational worlds, they are moving or changing the orbit with all their family members depending on the nuclear of each other" In this way; The gravitational worlds of the nuclear circle of the gravitational worlds, they are expandable with other in the orbits around nucleus, resulting this it seems **that the universe is expanding.**

From my research result- people can take the resolution that- In our present location and present time- **The Universe is not expanding.**

Astronomer Edwin P. Hubble found that most of the galaxies outside of the local group are receding from us, and the ones further away are retreat in the fastest. From Hubble's observation, scientists discovered that the universe is expanding.

From My Research Results: Rule of Big Bang, Rule of Evolution, Rule of Gravitation & Rule of Time, people can change concepts about the expanding Universe.

According to Rule of Big Bang Theory, in my research results- as I see it, nearly **14 billion** years ago i.e. at beginning of the creation, a part of the power of the **transcendent or** primordial black hole or the Infinite/Allah/God/Nature it became divisible as a result of the big bang. The part of energy was divided in the beginning of creation from the large field of dark energy, which

was below 50% of total energy. As I see it, 25% of energy was divided by the big bang and still 75% energy was in the primordial black hole or beginning of creation. In the most of natural power is reserved in the primordial black hole/Infinite/Allah/God or Nature from which, **the world of gravitation become influenced. Hence, the Universe stopped Expanding.** Divisible or divided Dark energy was 25% & the rest was still 75% Dark energy. From the transcendent or from the primordial black hole or Infinite/Allah/God/Nature, some parts of energy had been divided through big bang, so, there is large field of energy from where the **big crunch had become.**

According to Rule of evolution theory- Everything of the world of matter is the result of evolution from the divisible or divided power of the primordial black hole or the Creator/Infinite/Allah/God. As a result of the research carried out for getting the solutions of these, nearly 14 billion years ago, by the big bang- 25% divisible power started evolution. As I see it, the Dark energy or power of primordial black hole or Power of the Infinite/Allah/God is still 75% and only 25% of divisible or divided power is rolling - moving and always is changing in the universe- **after the Big Bang.** The changing function of the universe is going on always i.e. everything of the real world is always evolving changing and by overcoming the steps of change come, **various faced physics.** The changing function of everything in the universe is going on always and the present scenery is not similar with past and also will not resemble with the future. **When the velocity of the energy reduced then the changes began in the attraction of gravitation of the Primordial black hole or Infinite or Allah or the God.** **Again,** by the telescope, Astronomer Edwin P. Hubble first observed the distribution of galaxies in space. **Edwin Hubble looked by the telescope- The Universe is expanding. Yet in naked eyes or through telescope is the evolution/variable from our angle of vision. In this way we can not find out present positions of any place of space and we can't find out the present pictures of any place of space or structure of sketch of the universe. Just at this time, what is happening in the eventful Universe? Nobody can find out- in naked eyes or through telescope, the present events of any place of space. In or under the circumstances- again we can take the resolution that- The Universe is not Expanding.**

According to Rule of gravitation theory says that in the super cluster of galaxies, cluster of galaxies and galaxy, there are the black holes of other kinds of energy in the deep of gravitational world. They are moving or changing the orbit with all of their family members depending on the nuclear of each other. According to this rule; all the gravitation worlds of universe have become the victims of rolling or moving into the oval orbits of critical radius. The gravitational worlds of the nuclear circle of the gravitational worlds are expandable with other in the orbits around nucleus, resulting that the universe is expanding.

The gravitational worlds of the universe in the eternal radius of the circle, in the large distance around from the nuclear of the circle, there are six collective worlds; they are closely related with each other by their gravitation through the nuclear fusion formula, Among the old six gravitational worlds, three collective worlds are invisible and another three are visible. The collective invisible worlds are three kinds of black hole and rest three are visible solar system. The visible worlds are in the deepest place of future from the place of nuclear fusion of the circle. The gravitational worlds of the nuclear circle of the gravitational worlds are expandable with other in the orbits around nucleus, resulting that the universe is expanding.

Consequently lawfully- in our present time- We can take the resolution that- **The Universe is not expanding.** Being the nuclear of the circle of the gravitational force; the visible worlds are going in distance from each other in the difference of movement on the critical radius.

According to Rule of Time dimension theory and my research results, History of the universe or case is from single sight. Such as from your location- you are looking in the evolution- big space/universe through that nearly 14 billion light years past from us. **Yet!** From my brief theory with faculty research- I found that the 14 billion years past is on this place. Both locations are same and everything is center point in the Universe from own location. From our location- **Our Home Planet is Center point in the universe. From the sun location- our sun is center of the Universe. From the moon location- our moon is center point in the Universe. From your location- you are the center and from my location- I am center of the Universe. Actually my very brain is centre of the Universe. The most important tale is that- in the Universe, own location is center past of all. In or under the circumstances- we can take the resolution that- The Universe is not Expanding.** First Big Bang is the universe's earliest known event i.e. earliest moments of the big bang and location of the big bang is- **every where or every place in the universe. In or under these circumstances- People swiftly found out- in our present time and from our present location- The Universe is not expanding.**

Again from the following information and we can know- **why the Universe is not expanding.**

As a result of the big bang, single store house of nature (Power) became divided and spreaded in the space. After lagging behind from the level of speed, level of power, spread of Gravitational force; there was evolution in the level of power. After going to the specific level of evolution super massive black holes or quasars and primordial black hole got its full form. After lagging behind from the Gravitational force and going to another specific level, super nova black holes or pulsars were created from the quasar or **super massive black hole around which galaxies are continually moving in a circular motion.**

Really, from the nuclear of the circle of the gravitational force, the gravitational worlds are expanding from each other, moving around the radius of nuclear inside the circle. In the difference of movement, their distance boundary is always increasing in the eternal radius. Galaxies or planets are not going away from one another. But this scenery appears to be different by sitting in the real world which was not received by going to the last location of the boundary of the **depth of imagination of our brain. So, the Universe is not expanding, Expanded velocity of the universe is going forward towards the critical radius.**

At beginning of the creation, a part of the power of the Dark energy or Primordial black hole or the Infinite/Allah/God/Nature became divisible as a result of the big bang. According to this theory- A part of divisible power or 25% divided power is expanding or moving at first time and **the Universe is Expanding, but at our present time, Gravitational worlds are moving or changing the orbit with their all family members depending on the nuclear of each other. In this way- can find the sketch of the universe from our present to past; The minor planets move around the orbit of Planet, the planets around the Star, the stars around the Ordinary black hole, the ordinary black holes around the Super nova black hole, the super nova black holes around the Super massive black hole & super massive black holes with her all familys members around the orbit the Primordial black hole. In or under these circumstances- The**

Universe can not be expanding. Consequently lawfully- we can say that- **The Universe is not expanding.** Being the nuclear of the circle of the gravitational force, the visible worlds are going in distance from each other in the difference of movement on the critical radius.

The most remarkable issue is, if the Universe were expanding, **we would not have found Structure of Sketch of the Universe.**

Swiftly I can take the resolutions that there was- **mistaken discovery**, by renowned scientist. Now it is **100% Purified** and **Completed New Discovery of the Universe.**

The Structure of sketch of the universe from the past to present is structured in a way that **Super massive black holes with all her family's members circle around the orbit to Origins- The super nova black holes around the orbit to super massive black hole, The ordinary black holes around the orbit to super nova black hole, The stars around the orbit to Ordinary black hole, The planets around the orbit to Star, The minor planets move around the orbit to Planet.**

Again, If is the Universe is constantly expanding, **we would not find out seven kinds of gravitational worlds radiation/refraction on our place.** From our location our Universe is seven divisible gravitainal worlds, the first one of which is the unit and the rest six are collective. Lawfully in realism- seven divisible gravitational worlds radiation/refraction coming on our place- So rainbow is seven clours display. Hence, we can take the resolution that- **The Universe is not expanding.**

Again, if the Universe were constantly expanding, **we would not have found- Inside the Sketch of the Universe.** From my research results- we can see- The Structure of Sketch of the Universe. In this formula: **"All are combined in the material world of the space by their respective gravitation"** As per this formula: he who created from its medium, he moves depending on its creation or nuclear. The minor planets move depending on its created nuclear of the planet. Planets & Asteroid created from the star, the planets and asteroid move depending on its nuclear of the star. Stars created from the ordinary black hole, the stars move depending on its nuclear of the ordinary black hole. Ordinary black holes created from the super nova black hole, the ordinary black holes move depending on its nuclear of the super massive black hole. Super massive black holes or first stars created from the Transcendent or the Primordial black hole or the Infinite, the super massive black holes move depending on its nuclear of the primordial black hole or the big black hole or the Transcendent/Infinite/Allah/God/Vogoban/Creator/Nature.

Consequently lawfully- people can see that- **The Universe is not expanding.** Being the nuclear of the circle of the gravitational force, the visible worlds are going in distance from each other in the difference of movement on the critical radius.

Using the telescope, Astronomer Edwin P. Hubble first observed the distribution of galaxies in space. **Scientist discovered** that the universe is expanding and lawfully, **Nobel foundation gave Nobel Prize to the scientist in 1929.** From the long time- People & Students have been receiving education- **The Blunder discovery** and in my research- results- **it's now 100% completed.** Consequently lawfully- Swiftly people can find out about- **Famous Scientist- Astronomer Edwin P. Hubble's Mistaken Discovery, Lawfully- now it is 100% Purified.**
