

Habitable Worlds 2021 Workshop
Open Engagement – Group B

Abstract #	Title	1 st Author
19	Obliquity Variation of Circumbinary Planets	Gongjie Li
34	Removing Stellar Activity Signals from Radial Velocity Measurements Using Neural Networks	Zoe de Beurs
40	Dayside land on tidally locked M-Earths	Evelyn Macdonald
87	Effect of mantle oxidation state on the magma ocean atmospheric evolution	Nisha Katyal
89	Stellar Variability & Precision Radial Velocimetry: Lessons for atmospheric characterization	Eric Ford
91	Is there any other habitable planets in universe except Earth?	Md Redyan Ahmed
93	Stellar Energetic Particle-driven Production of Biologically Relevant Molecules in Atmospheres of Young Earth-like Exoplanets Around Active G-K Stars	Guillaume Gronoff
97	Stable, Closely-Spaced Three-Planet Systems	Sacha Gavino
98	Ground-Based Exoplanet Direct Imaging in the Next Decade: The Path to Imaging Another Earth	Thayne Currie
101	Magma ocean differentiation regime in the earliest formed rocky bodies -Internal or External?	Damanveer Grewal
102	A very early origin of isotopically distinct nitrogen in the inner Solar System protoplanets	Damanveer Grewal
103	XUV-Driven Atmospheric Mass Loss of M Dwarf Planets due to Flaring	Laura Amaral
104	Impact of Tides on the Potential for Exoplanets to Host Exomoons	Armen Tokadjian
105	Drifting into habitability	Bradley Hansen
106	Planetary Systems Biochemistry	Sara Walker
107	Computational study on the importance of UV light in the production of molecules of prebiotic importance in an astrobiological context	Marion Armas Vazquez
108	In-Situ Exploration of the Exoplanet Next Door: Revealing the Chemistry, Habitability, and Evidence of Biological Processes in the Clouds of Venus	Kevin Baines
109	The variation of T_{eq} for the exoplanets detectable by Roman in direct imaging: a catalogue of targets	Óscar Carrión-González
110	Inferring Time Evolution of Volcanism in Extrasolar Planets and its Implications on Habitability	Varnana Kumar
111	Idealised convection in pure steam atmospheres	Xianyu Tan
112	Retrieving Earth's phase curve	Roderick De Cock
113	Survival of Primordial Planetary Atmospheres: Mass Loss from Hot and Temperate Low-Mass Planets	Alex Howe

116	Modelling atmospheric biosignature and climate responses for Earth-like planets orbiting M-dwarf stars	John Grenfell
117	The Space Environment of the Habitable Zone Exoplanet TOI 700 d	Ofer Cohen
120	Photoevaporation of Water Dominated Exoplanet Atmospheres	Laura Harbach
121	H ₂ O-Rock Reactions at the Deep Interiors of Water-Rich Planets	Sang-Heon Shim
122	Discovering Earth Analog Candidates in the Near-UV	Thomas Ditto
123	Delivery of water and volatiles to planets in the habitable zone in the Proxima Centauri system	Sergei Ipatov
127	Investigation of Raman and other spectroscopic signatures with advanced statistics: an approach for cataloguing Polar microbes	Christine Foreman
129	SETI prioritization and follow-up of potentially habitable TESS planet candidates	Tansu Daylan
130	About the diversity of M-star astrospheres and the role of cosmic rays within	Konstantin Herbst
131	Keck/MOSFIRE Spectro-photometric variability of a Young Planetary-Mass Brown Dwarf	Elena Manjavacas
132	Flare Rates, Rotation Periods, and Spectroscopic Activity Indicators of a Volume-Complete Sample of Mid-to-Late M dwarfs within 15 Parsecs	Amber Medina
134	Simulating <i>Roman</i> Astrometry of Terra Hunting Stars	Daniel Yahalomi
135	From clouds to crust - Cloud diversity and surface conditions in atmospheres of rocky exoplanets	Oliver Herbort
136	Measurements of the Ultraviolet Spectral Characteristics of Low-mass Exoplanetary Systems (Mega- MUSCLES)	David Wilson
138	Finding Missing Earths: An Integrated Analysis of Multi-planet Systems and Assessing Likelihood of Potentially Habitable Worlds	Jeremy Dietrich
139	Probing solid compositions in planetary core formation zones	Melissa McClure
140	How does the background atmosphere affect the onset of the runaway greenhouse? Insights from 1D radiative-convective modeling.	Guillaume Chaverot
141	On the origin and persistence of the tiger stripe fissures and eruptions on Enceladus	Max Rudolph
143	Enabling new science with the ExoPlaSim 3D climate model	Adiv Paradise
144	Ground Based IR Spectroscopy: Henrietta and MIRMOS	Nicholas Konidaris

145	Atmospheric and Spectral Simulations of TOI-700 d, a Habitable Zone Earth-Sized Planet Synchronously Rotating Around an M Dwarf	Gabrielle Engelmann-Suissa
146	Quantifying the impact of stellar UV scaling relations on modelling planetary atmospheres	Dillon Teal
148	The Language of Stars	Anamaria Berea
149	K2-18b: first water vapour detection in a habitable-zone planet	Angelos Tsiaras
151	Observational constraints for pebble-driven planet formation	Ilaria Pascucci
152	Prospects for interdisciplinary efforts in the study of survival of biomolecules under space radiation in planetary/small-bodies science	Fabiana Da Pieve
153	Estimates of Photochemical Oxygen Loss Rates from Mars-like Exoplanets	Thomas Cravens
154	Refining extreme precision radial velocity measurements by understanding stellar activity's effect on asymmetric line shifts.	Donald Nguyen
155	Assessment of Ammonia as a Biosignature Gas in Exoplanet Atmospheres	Jingcheng Huang
158	Venus D and H Loss: An Overview of Measurements and Outstanding Questions	Michael Chaffin
159	A Public Data Challenge for Exoplanet Science with the Roman Space Telescope Coronagraph Instrument	Ell Bogat
161	On Retrieving the Composition of Terrestrial Exoplanet Atmospheres	Jegug Ih
163	Abiotic Oxygen on the Atmospheres of Venus-Like Exoplanets	Michael Wong
164	Habitable Zones in Binary Star Systems with a Circumbinary Giant Planet	Nikolaos Georgakarakos
