## The Exotic Atmosphere of an Extreme World: Detection of Ionized Calcium in WASP-76b

*The Astrophysical Journal Letters, 919, L15*

- WASP-76b is an **ultra-hot Jupiter** with dayside temperatures up to **4,400 degrees F**
- Previous studies indicate that it may **rain iron** from its skies
- We detected **sodium** and **calcium** in its atmosphere

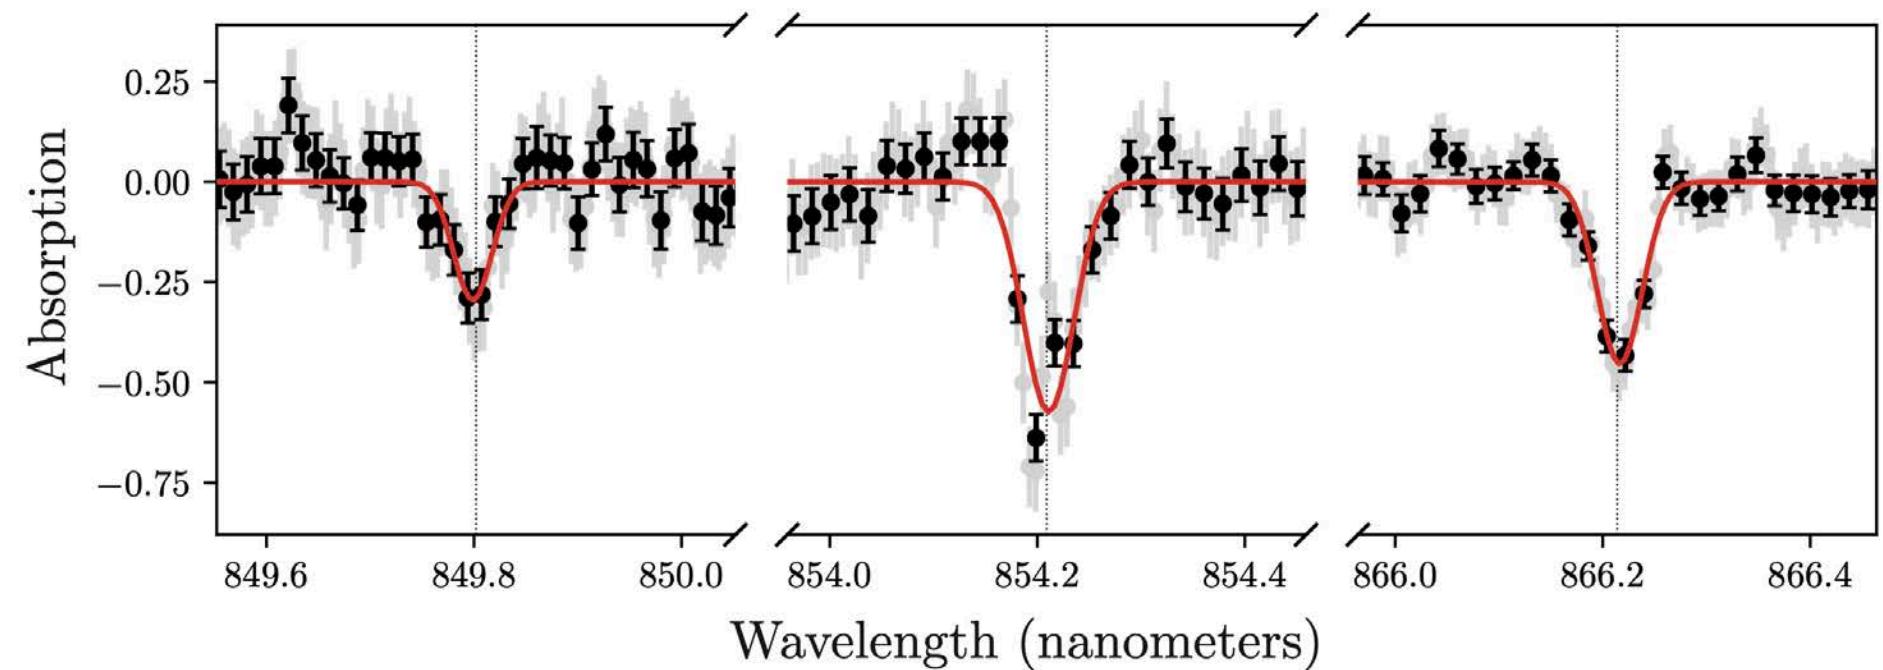

**Emily Deibert, Ernst de Mooij, Ray Jayawardhana, Jake Turner, Andrew Ridden-Harper, Luca Fossati, Callie Hood, Jonathan Fortney, Laura Flagg, Ryan MacDonald, Romain Allart, David Sing**

## The Exotic Atmosphere of an Extreme World: Detection of Ionized Calcium in WASP-76b

*The Astrophysical Journal Letters, 919, L15*

- Strong calcium signal indicates that the atmosphere is **even more extreme** than expected:
- The exoplanet is **hotter than expected**, and/or has **strong atmospheric winds**

*Emily Deibert, Ernst de Mooij, Ray Jayawardhana, Jake Turner, Andrew Ridden-Harper, Luca Fossati, Callie Hood, Jonathan Fortney, Laura Flagg, Ryan MacDonald, Romain Allart, David Sing*
